

ASTM - A249/A249M

Standard Specification for

Welded Austenitic Steel Boiler, Superheater, Heat- Exchanger, and Condenser Tubes

This specification covers nominal-wall-thickness welded tubes and heavily cold worked welded tubes made from the austenitic steels listed in Table 1, with various grades intended for such use as boiler, superheater, heat exchanger, or condenser tubes.

Grades TP304H, TP309H, TP309HCb, TP310H, TP310HCb, TP316H, TP321H, TP347H, and TP348H are modifications of Grades TP304, TP309S, TP309Cb, TP310S, TP310Cb, TP316, TP321, TP347, and TP348, and are intended for high-temperature service such as for superheaters and reheaters. The tubing sizes and thicknesses usually furnished to this specification are 1/8 in. [3.2 mm] in inside diameter to 12 in. [304.8 mm] in outside diameter and 0.015 to 0.320 in. [0.4 to 8.1 mm], inclusive, in wall thickness.

Tubing having other dimensions may be furnished, provided such tubes comply with all other requirements of this specification.

Mechanical property requirements do not apply to tubing smaller than 1/8 in. [3.2 mm] in inside diameter or 0.015 in. [0.4 mm] in thickness.

A. Heat Treatment :-

1. All material shall be furnished in the heat-treated condition in accordance with the requirements of Table 1.
2. A solution annealing temperature above 1950 °F [1065 °C] may impair the resistance to intergranular corrosion after subsequent exposure to sensitizing conditions in TP309HCb, TP310HCb, TP321, TP321H, TP347, TP347H, TP348, and TP348H.
3. When specified by the purchaser, a lower temperature stabilization or re-solution anneal shall be used subsequent to the initial high temperature solution anneal.
4. N08020 shall be supplied in the stabilization treatment condition.

^A Quenched in water or rapidly cooled by other methods, at a rate sufficient to prevent reprecipitation of chromium carbides, as demonstrated by the capability of passing Practices A262, Practice E. The manufacturer is not required to run the test unless it is specified on the purchase order.

In the case of low-carbon types containing 3 % or more molybdenum, the applicability of the sensitizing treatment prior to testing shall be matter for negotiation between the seller and purchaser.

^B Quenched in water or rapidly cooled by other methods.

^C A solution treating temperature above 1950 °F [1065 °C] may impair resistance to intergranular corrosion after subsequent exposure to sensitizing conditions in the indicated grades. When specified by the purchaser, a lower temperature stabilization or re-solution anneal shall be used subsequent to the higher-temperature solution anneal prescribed in this table. ^D Cooled in still air, or faster.

B. Chemical Composition :-

The heat analysis shall conform to the requirements as to chemical composition given in Table 2.

^A Maximum, unless otherwise indicated.

^B New designation established in accordance with Practice E527 and SAE J1086.

^C The method of analysis for nitrogen shall be a matter of agreement between the purchaser and manufacturer.

^D For small diameter or thin walls, or both, where many drawing passes are required, a carbon maximum of 0.040 % is necessary in Grades TP 304L and TP 316L. Small outside diameter tubes are defined as those less than 0.500 in. [12.7 mm] in outside diameter and light wall are those less than 0.049 in. [1.2 mm] in minimum wall thickness.

^E Iron shall be determined arithmetically by difference of 100 minus the sum of the other specified elements. ^F (Al + Ti) = 0.85 to 1.20.

C. Tensile Requirements :-

The material shall conform to the tensile properties prescribed in Table 3.

D. Hardness Requirements :-

The tubes shall have a Rockwell hardness number not exceeding the values specified in Table 3.

Table 3^A

^A Not applicable to tubes less than 1/8 in. [3.2 mm] in outside diameter or having wall thickness below 0.015 in. [0.4 mm], or both. The tensile properties of such small diameter or thin wall tubes shall be a matter of agreement between the manufacturer and the purchaser.

E. Grain Size Requirement:-

| | Grain Size | Test Methods |
|--|---------------|--------------|
| Grades - TP309H, TP309HCb, TP310H and TP310HCb | 6 or coarser. | E112 |
| Grades - TP304H, TP316H, TP321H, TP347H and TP348H | 7 or coarser. | E112 |
| UNS S32615 | 3 or finer | E112 |
| UNS N08810 and N08811 | 5 or coarser | E112 |

F. Mechanical Tests:-

1. Tension Test.
2. Flattening Test.
3. Flange Test.
4. Reverse-Bend Test.
5. Hardness Test.
6. Hydrostatic or Non-destructive Electric Test.

G. Supplementary Requirements :-

1. Pneumatic Test.
2. Intergranular Corrosion Test.
3. Weld Decay Test:-
This test is not applicable to alloys with a nickel content $\geq 19.0\%$ or a molybdenum content $\geq 4.00\%$, or both.
Heavily cold worked tubes (HCW) shall be capable of passing the weld decay test with a weld metal to base metal loss ratio of 0.90 to 1.10.
4. Stress-Relieved Annealed Tubes:-
When stress-relieved tubes are specified, tubes shall be given a heat treatment at 1550 to 1650 °F [845 to 900 °C] after roll straightening.
Cooling from this temperature range may be either in air or by slow cooling.
