## Standard Specification for Welded Nickel and Nickel-Cobalt Alloy Pipe

This specification covers pipe in Schedules 5S, 10S, 40S, and 80S through 8-in. nominal pipe size and larger as set forth in ANSI B36.19.

Two classes of pipe are covered as follows:

Class I—As welded and solution annealed or welded and sized and solution annealed.

Class II—Welded, cold worked, and solution annealed.

### A. General Requirement :-

- Material furnished under this specification shall conform to the applicable requirements of Specification B775 unless otherwise provided herein.

### B. Chemical Composition :-

- The material shall conform to the composition limits specified in Table 1.

<sup>A</sup> *D* refers to the diameter of the tension specimen.

<sup>B</sup> Solution annealed at a temperature between 2200 to 2275°F (1204 to 1246°C) followed by a water quench or rapidly cooled by other means.

2. Flattening Test.
3. Transverse Guided Bend Test—
  - i. At the option of the pipe manufacturer, the transverse guided bend test may be substituted in lieu of the flattening test.
  - ii. Guided bend test specimens shall be prepared and tested in accordance with Section IX, Part QW 160 of the ASME Boiler and Pressure Vessel Code and shall be one of the types shown in QW462.2 and QW462.3 of that code.
4. Hydrostatic or Non-destructive Electric Test— Each pipe shall be subjected to either the hydrostatic or the non-destructive electric test at the manufacturers option.
